Topic:- Addition with carry over and word problems

Addition with carry over

Example 1

In addition ,we always add the digits in ones' place first. If we get a two digit number as their sum , the digit in ones' place is written in ones' place and the digit in tens' place is carried into tens' place.

Let us learn this through an example.

$$\begin{array}{r} 45 \\ + 7 \\ \hline \end{array}$$

Let us first add the digits in ones' place ( $5 + 7$ ).

Adding 5 and 7, we get **12**.

In 12 , 2 is in ones' place and 1 is in tens' place.

So , let us write **2** in ones' place and carry **1** into tens' place.

$$\begin{array}{r} \textcircled{1} \\ 45 \\ + 7 \\ \hline 52 \end{array}$$

Now, let us add the digits in tens' place (1 + 4).

$$\begin{array}{r} \textcircled{1} \\ 45 \\ + 7 \\ \hline 52 \end{array}$$

Adding **45** and **7**, we get **52**

We write this as **45 + 7 = 52**

We read this as **45** plus **7** is equal to **52**.

### Example 2

$$\begin{array}{r} 37 \\ + 28 \\ \hline \end{array}$$

Let us add the digits in ones' place (7 + 8).

Adding **7** and **8**, we get **15**

Let us write 5 in one's place and carry 1 into tens' place.

$$\begin{array}{r} \textcircled{1} \\ 37 \\ + 28 \\ \hline 5 \end{array}$$

Now, let us add the digits in tens' place (1+3+2).

Adding **1**, **3** and **2**, we get **6**.

$$\begin{array}{r}
 \textcircled{1} \\
 37 \\
 + 28 \\
 \hline
 65
 \end{array}$$

Adding **37** and **28**, we get **65**.

We write this as  **$37 + 28 = 65$**

We read this as **37 plus 28 is equal to 65**.

**Add the following**

$$\begin{array}{r}
 24 \\
 + 9 \\
 \hline
 \hline
 \end{array}$$

$$\begin{array}{r}
 35 \\
 + 5 \\
 \hline
 \hline
 \end{array}$$

$$\begin{array}{r}
 47 \\
 + 8 \\
 \hline
 \hline
 \end{array}$$

$$\begin{array}{r}
 52 \\
 + 9 \\
 \hline
 \hline
 \end{array}$$

$$\begin{array}{r}
 38 \\
 + 8 \\
 \hline
 \hline
 \end{array}$$

$$\begin{array}{r}

$$\begin{array}{r}

$$\begin{array}{r}

 \end{array}$$

$$\begin{array}{r}
 57 \\
 + 29 \\
 \hline

 \end{array}$$

$$\begin{array}{r}

 \end{array}$$

$$\begin{array}{r}

 + 33 \\

## Word problems

A word problem is a mathematical question based on real life situations , expressed in words.

To solve word problems, we need to write statements.

### Example 1

1. There are **35** girls and **45** boys in a class. How many students are there in all?

( Here the number of girls and boys are given. We need to find the total number of students in the class. Clue word '**all**' tells us to add. )

### Solution

Number of girls in the class = **35**

Number of boys in the class = **40**

Total number of students = **35 + 40**

$$\begin{array}{r} 35 \\ + 40 \\ \hline 75 \end{array}$$

There are **75** students in the class.

2. Ravi has **24** marbles. Nitin has **57** marbles. How many marbles do they have altogether?

( Here number of marbles Ravi and Nitin have is given. We need to find the total number of marbles they have. Clue word '**altogether**' tells us to add. )

### Solution

Number of marbles Ravi has = **24**

Number of marbles Nitin has = **57**

Total number of marbles = **24 + 57**

$$\begin{array}{r} \textcircled{1} \\ 24 \\ + 57 \\ \hline 81 \end{array}$$

There are **81** marbles altogether.
